

B.Tech. Computer Science and Engineering

Laboratories

Programming Laboratory

Programming Lab facilitate the students to develop simple software applications using C, C++, Python and Java. It provides practical exposure to the students for implementing software development concepts in real time applications.

Database Management Systems Laboratory

DBMS lab facilitate the students to develop back end application software by using ORACLE, MYSQL

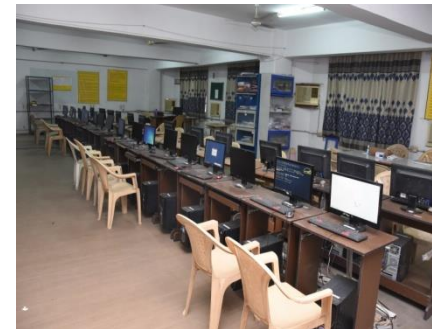

Operating Systems Laboratory

OS lab facilitate the students to implement the operating system concepts by using C Program

Software Engineering Laboratory

Software Engineering Laboratory facilitate the students to develop the application software based on software engineering methodology by using Rational Suit Software

Web Technologies Laboratory

Web Technologies Laboratory facilitate the students to implement basic web-based programs using languages like HTML, PHP, XML and JAVA script

Compiler Laboratory

Compiler Laboratory facilitate the students to implement the compiler programming concept by using C and C++. It also enables the student to implement YAC and LEX program

Computer Networks Laboratory

Computer Networks Laboratory facilitate the student to do network socket programming and to implement the encryption decryption concepts for network security using C and C++
