

## Department of Humanities and Sciences

### Laboratories

#### Applied Physics Laboratory

To make the students gain knowledge to co-relate theoretical physics in developing new components of engineering materials. To achieve perfectness in experimental skills and to develop more confidence in design of various electric and electronic circuits.

#### Engineering Chemistry Laboratory

Student will appreciate the central role of chemistry in our society and use this as a basis for ethical behavior in facing issues by chemists including an understanding of safe handling of chemical, environmental issues and key issues facing our society in energy, health and medicine.

#### Engineering Workshop

The experiments are conducted to get aware of the students about the procedures and outcome of them. These results induce the prime idea of craftsmanship of household utilities of various trades that every human comes across while facilitating them.

#### English Language Communication Skills Laboratory

The Language Lab is used to provide computer assisted multimedia instruction ensuring fluency of the students in Spoken English and also neutralize their mother tongue influence which in turn will enhance their public speaking and employability skills.

### **Advanced English Communication Skills Laboratory**

The Language Lab focuses on using multimedia instructions per language development of the engineering students to prepare themselves for their placements and career.
